

RAPSCO has recently executed an agreement to market The ZEE Company Metro/Merlin Turbine Modification STC/PMA program. This unique Mod takes the old Garrett AiResearch cooling turbine and replaces it with the new style Honeywell cooling turbine. Not only is this system far more efficient but will reduce overhaul costs and lead-times substantially.

This program replaces the old style refrigeration unit with a new FAA approved refrigeration unit that includes the latest (and much less expensive to overhaul) cooling turbine. The Installation of this modification will pay for itself with the first cooling turbine overhaul.

The best news is that NO Modifications are required for installation! All parts and installation are FAA approved!

Parts Affected:

Old Style Installation:

Refrigeration Unit P/N: 926130-5-1
 Heat Exchanger P/N: 183072-1-1
 Cooling Turbine P/N: 203745-3-1

New Improved Installation:

Refrigeration unit P/N: TD750 Series
 Heat Exchanger P/N: 183072-1-1 or 189822-1-1
 Improved Cooling Turbine P/N: TD755-9 or (204755-4-6)

Currently modifications are \$25,000 Exchange for one side or \$45,000 Exchange for both sides on one order.

Effective July 1, 2008 modifications will increase to \$32,500 for one side or \$60,000 Exchange for both sides on one order.

RAPSCO and The ZEE Company are both FAA approved parts manufacturers. RAPSCO and The ZEE Company work together on this Turbo Mod Program to provide exceptional value to owners and operators by helping reduce operational costs not just today but also over the long haul.
